A MESSAGE FROM THE SECRETARY OF STATE PLANNING

Following the 1980 U.S. Census, Maryland must draw new State Legislative and Congressional districts. Governor Harry Hughes assigned to the Department of State Planning the responsibility for providing the basic data and the system to assist in redistricting and reapportionment.

This report, Maryland Precinct Population Data for Redistricting and Reapportionment, is a consolidated State-wide report on precinct population for the twenty-three counties and Baltimore City.

This report replaces the earlier Department of State Planning reports on precinct population (publications 81-17 and 81-20). It contains all corrections as noted in previously distributed errata.

The report contains a list of the precincts and their population counts which will be used in drawing new districts. The population data are reported by county, election districts, and precincts. The precinct is the building block for the redistricting and reapportionment process.

The population data reported here were derived from 1980 population counts provided to Maryland by the U.S. Census Bureau under Public Law 94-171. The precinct data as originally provided by Census could not be used, however, for the several reasons explained in the Methodology section of this report. The data have been adjusted to reflect current precinct boundaries in the twenty-three counties and Baltimore City.

The precinct boundaries were provided by the local election boards. The precincts listed in this report conform to precinct boundaries as they existed on June 1, 1981.

These precinct population counts and the procedures for determining them have been approved, as shown on the following page.

We all hope that these data are helpful to those interested and involved in this very important decennial process of redistricting and reapportionment.

Very sincerely yours,

Constance Lieder

Constance Lieder

OFFICE OF SECRETARY

CERTIFICATION OF DATA

Maryland population by county, by election district, and by precinct as contained in this report is the official data that will be used for reapportionment and redistricting in Maryland.

Fred L. Wineland, Secretary of State
State of Maryland Executive Department

Willard A. Morris, Administrator
Administrative Board of Election Laws

Constance Lieder, Secretary
Department of State Planning

F. Carvel Payne, Director
State Department of Legislative Reference

ACKNOWLEDGMENTS

This report was prepared jointly by the staffs of the Department of State Planning's Office of Planning Data and the University of Maryland's Department of Geography, under contract with the Department of State Planning. In particular, the efforts of Susan Alderman, Janet Clocker, and Karen Maisenhalder, with the Department of State Planning and Kathleen McCormick and Alan Aronson with the University of Maryland were crucial to the generation of the 1980 precinct population counts given in this report.

Agencies of particular assistance in the determination and verification of precinct boundaries used to generate the population counts include the:

State Administrative Board of Election Supervisors
Supervisor of Elections for Baltimore City
Baltimore City Planning Department
Baltimore County Office of Planning and Zoning
Harford County Planning Department

The county election boards throughout the State also helped by supplying county maps showing current precinct boundaries.

METHODOLOGY

The precinct population data presented in this report were derived from counts provided by the U.S. Census Bureau under Public Law 94-171. Those data had to be adjusted before they could be used in Maryland's redistricting and reapportionment process. This section describes the reasons for the adjustments and the process used to accomplish them.

Under Public Law 94-171, the Census Bureau provides states with special, small area population counts for use in redistricting and reapportionment. The population data include total count, race and Spanish origin. Maryland elected to receive these data by precincts in the 23 counties and by blocks in Baltimore City. The State provided the Census Bureau with 1977 county precinct maps for its use in coding data.

The Department of State Planning received the 1980 population data in March, 1981. County data were provided by election district, precinct, census tract, and enumeration district or block. City data were provided by census tract and block. The precincts reported were those existing in 1977.

The Census data, however, could not be used as received for several reasons:

1. A number of new election precincts were created between 1977 and 1980 through the subdivision of existing precincts;

2. In a few instances, election precinct boundaries were legally changed from those existing in 1977;

3. County precincts did not always conform to census designated blocks or enumeration districts and were modified by the Census Bureau to conform to their standards for census geography;

4. In some cases, the Census Bureau chose to combine election precincts; and

5. Some census blocks were "unassigned," and some population "unallocated," i.e., not designated to any precinct.[1]

In order to correct the discrepancies between the data and the current precincts, a process was followed which is described here.

---

[1]Unassigned blocks/ED's - where election precinct boundaries did not coincide with tabulation area boundaries (i.e., an ED or block straddles an election precinct boundary), the Census Bureau did not assign the population to a precinct.

Unallocated population - during Census processing, some population may have been assigned to a block number either not shown on census maps or not assigned to any election precinct when the precinct/block equivalency file was developed. Since the exact geographic location of this population was not ascertained, the Census Bureau did not allocate it to an election precinct.

First, 1980 county precinct maps were submitted to us in March, 1981 by individual county election boards. These maps were compared to the 1977 precinct maps used by the Census Bureau for coding data.

After comparing the precinct boundaries on both maps, discrepancies were noted. The affected areas on the county election maps were marked and the precincts involved listed. The discrepancies were then recorded on a set of census work maps. The work maps included the metropolitan map series, the county map series, and the place/vicinity map series for Maryland. The current legal precinct boundaries and the census precinct boundaries were transferred to the work maps in those areas affected by a change, and the necessary movement of blocks to conform to 1980 precinct boundaries was recorded. Blocks and enumeration districts were then assigned to the appropriate current legal precinct.

Block or enumeration district data could not be subdivided. In some cases, the county defined precinct boundary split a census block or enumeration district. When the split block occurred within a series of blocks that were moved, it was assigned to the new election precinct with that sequence or group of blocks. When no information was available about where to assign a split block, it remained in the originally assigned census precinct. The corresponding changes were made in the population data for each precinct.

For those precincts where there were no boundary discrepancies, the census block definition and population data were assumed to be correct.

Finally, Census Bureau unassigned blocks and unallocated population were assigned to an election precinct by locating the census tract and the series of blocks around the unassigned/unallocated block on the census work maps. Where there were unlabeled blocks on the work maps that appeared to be the unassigned or unallocated blocks, these blocks were assigned to the precinct whose boundaries included the unlabeled blocks.

In Baltimore City, where the Census provided population data by block, the City Board of Election Supervisors had to provide the Department of State Planning with an equivalency table showing which blocks belonged to which precincts.

In approximately eighty instances in Baltimore City, Census blocks with population were divided by precinct boundaries. Rather than assign these split blocks to a single precinct, the City chose to allocate the population in these blocks between the affected precincts.

A methodology for allocating the population in split blocks to their respective precincts was developed by the City's Department of Planning. The City Planning staff, with assistance provided by State Planning staff, developed the split block population estimates. This information was transmitted by the City's Department of Planning to the Department of State Planning in a report, "Population Allocation to Parts of Blocks Split by Precinct Lines Baltimore City." A detailed description of the methodology used and technical work done is available for review at the Department of State Planning.

Using both the block equivalency table from the City Board of Election Supervisors and split block population estimates from the City's Department of Planning, the Department of State Planning computed the ward (district) and precinct population counts listed in this report from Census data (P.L. 94-171).

The precincts listed in this report are the City precinct boundaries as they existed on June 1, 1981.

The block equivalency table and the split block population allocations provided have been certified by City officials as being the best available information for developing City population counts by wards and precincts.

The procedures used in deriving the precinct data for the State have been reviewed by State officials, and the precinct populations resulting from these procedures approved for use in Maryland's reapportionment and redistricting. Using these procedures, all 1980 Maryland population has been reassigned to a current legal precinct, and, thereby, is represented in the redistricting and reapportionment process.
